

PEO C4I AND SPACE SYSTEMS GOALS AND PRIORITIES

GOAL

Deliver threat-based C4I and space system capabilities to enable the fleet to **compete, deter** and **win – tonight**

PRIORITIES

DELIVER WARFIGHTING CAPABILITY

Providing the warfighter with C4I and Space capabilities to fight and win in every domain is our unqualified focus. Our dedication and commitment to deliver advanced, integrated capabilities has a single objective – equipping our warfighters for victory.

EMPOWER OUR WORKFORCE

Our professionalism is rooted in our ability to deliver what we promise. We will be experts in EVERY aspect of our programs to enable on-time delivery of required capabilities that are affordable, integrated and interoperable. We will invest the time to lead, mentor, educate, grow and inspire our workforce to perform at the highest levels.

STRENGTHEN PARTNERSHIPS

We will expand and build our partnerships. We rely on the talent, dedication and commitment of our combined government and industry workforce to deliver advanced, interoperable capabilities to cross-service and combined forces.

FOCUS AREAS

SPEED

Our adversaries are outpacing us and we must deliver critical capabilities to enable a more powerful fleet in 2020, not 2040. We will acquire, test, install and field capability at the speed of technology—not at the speed of the acquisition process. We will find ways to go faster, push the envelope, execute with acceptable risk and challenge all assumptions.

AFFORDABILITY

Fiscally constrained budgets are a reality within which we must successfully execute. We will be good stewards of taxpayer money and find ways to deliver the required capability affordably. We must understand where every dollar is being spent and continuously look for should-cost opportunities across the entire acquisition life cycle.

INTEROPERABILITY

We will deepen interoperability with our allies and partners enabling our joint and combined forces to fight and win in an integrated and distributed manner. Our systems must work together across all domains. We will understand our derived interoperability requirements and ensure our programs deliver an integrated capability.

CAPABILITY

We will deliver capabilities that are relevant, resilient and enable our forces to adapt to the changing character of war. To deliver an integrated and interoperable capability, we will manage at the system-of-systems capability level while executing at the program level.

*Accelerated delivery of required capability that is
affordable, integrated and interoperable*
